Some key points:

- For the navigation bar,
 - the designer could add banner background instead of using the cube logo on top left corner.
 - different colors from the Rubik's Cube can be used when users hover each option of the navigation bar (Now, all options are changed to yellow when they're hovered).
- On the home page, there are four icons that show each section of the website. It could be clickable so that users can directly move to the other sections of the website.
- Sub-headings of each section have red or green background. The designer might use more colors from the Rubik's Cube surfaces such as orange, blue, and yellow.
- For the Algorithms section, the designer might consider embedding the YouTube videos that shows the algorithm methods on the website.
